Donna,

Great. The file is 1198xR

SST = ShortSpined Thornyhead

I assume the column headers came through but if not here they are:
COLL, FISH, OTO, LEN, WT, SEX, SIDE, OWT, OLEN, OWID, MAC, DK, AR, JB, 2rD (my second
reading), AGE, Percent deviation from minimum reading, predicted age

AR = Angel Rodriguez

The code for sex is 1 = male, 2=female.

Fishparm is fine if it will handle the number of data points. I haven't
used Fishparm, but I get the same results using EXCEL and SYSTAT.

Glad to hear that things are moving swiftly.

I'll be glad to share with the student from Scripps. I sent you my draft
copy with comments.

Send me an unbound copy. I'll make copies and have a couple bound, one for
me and one for our library

Cheers

John

Side?

OWT = WT in ~~mg~~ gms

OLEN = in mm } sections or
WID whole

Coll = collection date?

Len = in mm?

What about 3rd dimen.

AGE = used in report
graph?
